The sequence is that encoding human tumour necrosis factor relatew (TRELL). TRELL or active fragments can be included with a carrier

Claim 2; Page 48-50; 69pp; English.

Tumour necrosis factor related ligand - useful for, e.g. treating auto-immune disease and immune responses to tissue grafts.

21/23.

and ninety two polynucleotides derived from a variety of cources which encode secreted proteins, useful for treating ancies and disorders such as autoimmune disorders.

82; 372pp; English.

Such as viral infections, bacterial infections, fungal tocimmune disorders (e.g. rheumatoid arthritis, multiple columnune thyroiditis and diabetes) and allergic reactions (e.g. asthma). They are also useful for treating ive diseases (e.g. Alzheimer's disease, Parkinson's if fibrosis, coagulation disorders (e.g. hemophilia), lisorders (e.g. rohn's disease) and tumours. They are also sue regeneration, for wound healing and in the treatment of and for treating myeloid or lymphoid cell deficiencies. 4863-ABK35454 represent polynucleotides of the invention relates to 592 polynucleotides which have been derived from unman tissue sources and which encode novel secreted polynucleotides can be used as probes for the in and isolation of full length cDNA and genomic DNA. The sand proteins can also be used as nutritional supplements. The useful in the treatment of various immune deficiencies

.c comprising a core, and at least one external loop, useful processes of bone formation or inhibiting bone resorption, treatments for disease or condition characterized by loss

ige 66-67; 78pp; English.

squence is that of a polynucleotide encoding a non-RANKL tumour necrosis factor (TNF) superfamily. The invention laturally-occurring proteins that contain one or more of the ICE loops of RANKL (see ABR42066-70) in combination with a stotein core obtained from a non-RANKL member of the TNF ilso provided are polynucleotides encoding such proteins. Sind to RANK, acting as mimics of RANKL. They can be used to formation by either inhibiting bone resorption or inducing thus providing treatment for diseases or conditions by loss of bone mass

I relates to compositions comprising heterotrimeric complexes stochs factor (TNF) ligand family members, and their use in it, prevention and treatment of disease. In one embodiment, imeric complex comprises full-length or extracellular (WEAK and full-length or extracellular portions of other TNF members, preferably VGGI or VGGI-SV. The heterotrimeric the invention are useful for treating an autoimmune disease, seoporosis, and particularly for inhibiting cancer cell in increasing B cell proliferation, or inducing apoptosis of ltimeric complex having a first polypeptide member of the is factor (TNF) ligand family, and a second different member family, useful for treating cancer, osteoporosis or an AAGGATGGGTCCAGAAGACCCCACTTCAGGCACTAAGAGGGGCTGGACCTGGCGGCA tumour necrosis factor; ligand; cytostatic; age 367-368; 388pp; English. ulpha gene useful for preparing a composition for treating lated with excessive or insufficient bone resorption e.g., Paget's disease or arterial calcification.

ď

3Q ID NO 23; 145pp; English.

relates to an isolated nucleic acid molecule encoding a ls factor family ligand. A composition comprising the body or its fragment is used for treating an individual in sed level of endokine alpha activity. The endokine alpha cesent in a heterotrimeric complex is used for treating an fing a disorder associated with excessive bone resorption, bis, Paget's disease or arterial calcification. Treating an 'ing a disorder associated with insufficient bone resorption instering an endokine alpha antagonist, which is the

rosis Factor family receptor polypeptides and ligands - agnosis and treatment of prostate cancer and developmental il abnormalities.

Fig 13A; 156pp; English.

on describes isolated Tumor Necrosis Factor (TNF) family peptides: APO4, APO6, APO8 and APO9 or their active id isolated TNF related ligands 1 and 3 (TNRL1 and TNRL3) or

their active fragments. APO4 is useful for diagnosing prostate c determining levels of APO4 in an individual. Prostate cancer can treated using APO4 selective binding agents linked to a therapeu molety. APO4 polypeptides are also useful for identifying select binding agents, useful in diagnosis/treatment of disease by bind agents to the polypeptide/active fragment which is extracellular expressed on the cell surface. The binding is preferably perform vivo. APO4 polypeptides/ active fragments are also useful for scient agonists and observing the charge for agonists and observing the charge activity. Effective planmacological agents useful in diagnosis of treatment of disease are also identified using APO4 polypeptides fragments and APO4 signal transducer molecules that specifically with a cytoplasmic domain of APO4 and detecting a change in leve activity. The method is performed in vivo or in vitro. APO polyper all leve useful for diagnosis/treatment of developmental or serational about the above as a management of developmental or gestational abnormalities. APO8 was transfected to human breast carcinoma ce GCGCCTTTCCTGAACCGACTAGTTCGGCCTCGCAGAAGTGCACCTAAAGGCCGGA 121 GCGCCTTTCCTGAACCGACTAGTTCGGCCTCGCAGAAGTGCACCTAAAGGCCGGAA CGGGCTCGAAGAGCGATCGCAGCCCATTATGAAGTTCATCCACGACCTGGACAGG 181 CGGCCTCGAAGAGCGATCGCAGCCCATTATGAAGTTCATCCACGACCTGGACAGG 241 GCGCAGGCAGGTGTGGACGGGACAGTGAGTGGCTGGGAGGAAGCCAGAATCAACA 589 TACCTGTACTGTCAGGTGCACTTTGATGAGGGGAAGGCTGTCTACCTGAAGCTGG TACCTGTACTGTCAGGTGCACTTTGATGAGGGGAAGGCTGTCTACCTGAAGCTGGC TCCCTCGGGCCCCAGCTCTGCCAGGTGTCTGGGCTGTTGGCCCTGCGGCC 541 récrécérecésarcéscacerecéresecearereaasserseceerre TACTICGGACTCTTCCAGGITCACTGAGGGGCCCTGGTCTCCCCACAGTCGTCCC GCGCAGGCAGGTGTGGACGGGACAGTGAGTGGCTGGGAAGGCAAGAATCAACA 529 AGCCCTCTGCGCTACAACCGCCAGATCGGGGAGTTTATAGTCACCCGGGCTGGGC AGCCCTCTGCGCTACTACCGCCAGATCGGGGGGTTTATATAGTCACCCGGGCTGGGC CTGGTGGATGGTGTGCTGGCCCTGCCTGGAGGAATTCTCAGCCACTGCGG TACTICGGACTCTTCCAGGTTCACTGAGGGGCCCTGGTCTCCCCACAGTCGTCCC GCCGGCTCCCCTCGACAGCTCTCGGCACCCGGTCCCCTCTGCCCCACCCTCAG GCCGGCTCCCCCTCGACAGCTCTCTGGGCACCCGGTCCCCTCTGCCCCACCCTCAGG 229 GICAGITIGGGGAGCCGGCAICGCIGICCGCCCAGGAGCCIGCCCAGGAGGAGGA TCCTCCCTGCGGATCCGCACCCTCCCCTGGGCCCCATCTCAAGGCTGCCCCCTTCC 0; Score 833.4; DB 2; Length 1030; Sequence 1030 BP; 223 A; 317 C; 279 G; 211 T; 0 U; 0 Other; 1; Indels Pred. ugiogenesis in a mammal for treating diseases mediated by e.g. solid tumors and vascular deficiencies of cardiac or ssue, by administering antagonist or agonist of TWEAK

ge 39-40; 46pp; English.

represents a DNA from the expression vector pDC409-LZ-TWEAK, a fusion protein comprising a growth hormone leader, a

leucine zipper multimerisation domain, and the extracellular dom human TWBAK. The fusion protein was used in the isolation of hum creceptor (TWBAKR) expressing clones from a COS cell human CDNA learner of the TWBAKR protein is a member of the tumour necrosis factor (TNF and induces angiogenesis. TWBAKR may therefore be used to screen develop TWBAKR agonists and antagonists for the modulation of angiogenesis, to be used in the treatment and diagnosis of human contactorised by angiogenesis include ocular disorders characterised by angiogenesis include ocular disorders characterised by ocular neovascularisation such as diabetic retire neovascular glaucoma, retinoblastoma, retinopathy of prematurity retrolental fibroplasia, rubeosis, uveitis, macular degeneration corneal graft neovascularisation, and inflammatory diseases such malignant and metastatic conditions such as sarcomas and carcino malignant and metastatic conditions such as sarcomas and carcino benign tumours and preneoplastic conditions, myocardial angiogen haemophilic joints, scleroderma, vascular adhesions, atheroscler plaque neovascularisation, telangiectasia, wound granulation, co atherosclerosis, peripheral atherosclerosis and ischaemia 250 AGTTTGGGGAGCCGGCATCGCTGTCCGCCCAGGAGCCTGCCCAGGAGGAGCTGG CCTTTCCTGAACCGACTAGTTCGGCCTCGCAGAAGTGCACCTAAAGGCCCGGAAAA GCTCGAAGAGCGATCGCAGCCCATTATGAAGTTCATCCACGACCTGGACAGGACG 430 GCTCGAAGAGCGATCGCAGCCCATTATGAAGTTCATCCACGACCTGGACAGGACG CAGGCAGGTGTGGACGGGACAGTGAGTGGCTGGGAGGAAGCCAGAATCAACAGCT 490 CAGGCAGGTGTGGACGGGACAGTGGCTGGGAGGAAGCCAGAATCAACAGCT GTGGATGGTGTGCTGGCCTGCGTGCCTGGAGAATTCTCAGCCACTGCGGCCACA CTCGGGCCCCAGCTCCGCCTCTGCCAGGTGTCTGGGGCTGTTGGCCCTGCGGGCCAGC 232 AGTITIGGGGAGCCGGGCATCGCTGCCCCAGGAGCCTGCCCAGGAGGAGCTGG 550 CCTCTGCGCTACAACCGCCAGATCGGGGAGTTTATAGTCACCCCGGGCTGGGCTCT 592 CIGIACIGICAGGIGCACTITGAIGAGGGAAGGCIGICIACCIGAAGCIGGACI creracreracerecarragargagagagagacrercracereaagereaacr GTGGATGGTGTGCTGCCCTGCCTGCAGGAATTCTCAGCCACTGCGGCCA CICGGGCCCCAGCTCCGCCTCTGCCAGGTGTCTGGGCTGTTGGCCCTGCGGCCAGG CCTCTGCGCTACAACCGCCAGATCGGGGAGTTTATAGTCACCCGGGCTGGGCTCT TCCCTGCGGATCCGCACCCTCCCCTGGGCCCATCTCAAGGCTGCCCCCTTCCTCA TCCTGCGGATCCGCACCCTCCCTGGGCCCATCTCAAGGCTGCCCCCTTCCTCA . 0 DB 4; Length 899; Sequence 898 BP; 187 A; 266 C; 267 G; 178 T; 0 U; 0 Other; 3; Indels Score 629.2; DB 4; Pred. GENEVA FACULTY MEDICINE.

Y, Browning JL; 619/13 is factor related ligand - useful for, e.g. treating cancer, isease and immune responses to tissue grafts.

45-46; 69pp; English.

compositions to treat cancer, autoimmune diseases or ses to tissue grafts, or to stimulate or suppress the immune useful to screen for TRELL receptors, by labelling with a call and screening compositions for binding. Agents ith TRELL receptor binding can also be screened for, can istered, optionally with interferon-gamma, to induce cell; suppress or alter immune responses (especially involving cinoma cells) involving a signal pathway between TRELL and The DNA sequence can be used in gene therapy for TRELL. ders in mammals (especially humans), e.g. tumours, inflammatory diseases or inherited genetic disorders, by it cells, and expressing, therapeutically effective amounts of a virus comprising a gene encoding TRELL. It may also the prepare probes for screening. that encoding mouse tumour necrosis factor related ligand preparation of prepare probes for screening c DNAs for TRELL-encoding sequences and for antisense

rosis Factor family receptor polypeptides and ligands - agnosis and treatment of prostate cancer and developmental abnormalities.

Fig 13B; 156pp; English.

on describes isolated Tumor Necrosis Factor (TNF) family peptides: APO4, APO6, APO8 and APO9 or their active of isolated Tumof APO9 or their active of isolated Tumof Indanosis and 3 (TNRL1 and TNRL3) or fragments. APO4 is useful for diagnosing prostate cancer by evels of APO4 in an individual. Prostate cancer can also be APO4 selective binding agents linked to a therapeutic polypeptides are also useful for identifying selective s, useful in diagnosis/treatment of disease by binding of the cell surface. The binding is preferably performed in Typeptides/active fragment which is extracellular, or the cell surface. The binding as preferably performed in Typeptides/active fragments are also useful for screening and antagonists by binding and observing the changer in APO4 ective pharmacological agents useful in diagnosis or disease are also identified using APO4 polypeptides/active ammic domain of APO4 and detecting a change in level of APO4 method is performed in vivo or in vitro. APO polypeptides agnosis/treatment of developmental or gestational duced apoptosis

                                                                                                                                                         TNRFSF12/APO3. Weak
                                                                                                                                                                                                                                                                              AR LOCATION: Type II membrane protein and secreted. ECIFICITY: Highly expressed in adult heart, pancreas, muscle, brain, colon, small intestine, lung, ovary, spleen, lymph node, appendix and peripheral blood es. Low expression in kidney, testis, liver, placenta, d bone marrow. Also detected in fetal kidney, liver,
                                                                                                                                                  Binds to FN14 and possibly also to TNRFSF12/APO3. We apoptosis in some cell types. Mediates NF-KappaB n. May promote angiogenesis and the proliferation of all cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                iogenesis; Apoptosis; Transmembrane; Glycoprotein;

proliferation in the absence of co-stimulus as well as IGE production in the presence of IL-4. Involved in immunoglobulir class switching (By similarity).
SUBUNIT: Homotrimer (By similarity).

FUNCTION: Cytokine that binds to INFRSF5. Mediates B-cell

-i- SUBCELLUTAR LOCATION: Type II membrane protein. Also exists extracellular soluble form (By similarity).

proteclytic processing (By similarity).
-!- SIMILARITY: Belongs to the tumor necrosis factor family.

Induces the proliferation of activated peripheral blood T cells. May have role in activation-induced cell death (AICD). May play a role cognate interactions between T cells and B cells/macrophages. -!- SUBGNIT: Homotrimer (Potential).
-!- SUBGRILULAR LOCATION: Type II membrane protein.
-!- IISSUE SPECIFICITY: EXPRESSED IN BRAIN, PLACENTA, LUNG, SKEL! MOSCLE AND KIDDEY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         MEDINE=94374434; PubMed=8088337; Adderson M.R., Smith C.A., Tough T.W., Davis-Smith T., Armitage F Falk B., Rows E., Baker E., Sutherland G.R., Din W.S., Goodwin R. It is produced through a collaboration Swiss Institute of Bioinformatics and the EMBL outstation -
with the 14-3-3 protein YWHAE, MEF2A, MEF2B and MEF2C arity). Interacts with HTATIP and EDNRA.

*** LOCATION: Nuclear and cytoplasmic. In the nucleus, it is with distinct submuclear dot-like structures. Shuttles ne nucleus and the cytoplasm. Treatment with EDNI results ing from the nucleus to the perinuclear region. The cytoplasm depends on the interaction with the 14-3-3 WHAE and may be due to its phosphorylation.
                                                                                                                                                                                                                                                                                                                                                                                 experimental confirmation available; he shuttling between the nuclear export sequence mediates the shuttling between us and the cytoplasm [By similarity]. be phosphorylated by CaMKI (By similarity). Be phosphorylated by CaMKI (By similarity). Solus: its activity is inhibited by Trichostatin A (TSA), istone deacetylase inhibitor (By similarity). Y: Belongs to the histone deacetylase family. Subfamily
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     t in position 877.
Ref.2 (BAC56929) sequence differs from that shown due to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            activity; TAS.

Thatterns of cell division revealed by transcriptional regulation
of genes during the cell cycle in plants.";
EMBO J. 13:616-624(1994).

-:- FUNCTION: Essential for the control of the cell cycle at the (mitosis) transition. G2/M cycline accumulate steadily during and are abruptly destroyed at mitosis.

-:- SUBUNIT: Interacts with the CDC2 and CDK2 protein kinases to a serine/threonine kinase holoenzyme complex. The cyclin submimparts substrate specificity to the complex.

-:- DEVELOPMENTAL STAGE: Accumulates steadily during G2 and is abruptly destroyed at mitosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    0.1-FEB-1994 (Rel. 28, Created)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Cytokine that binds to TNPRSF3/LTBR. Binding to the sptor TNFRSFB modulates its effects. Activates NFRB, is the proliferation of T cells, and inhibits growth of carcinoma HT-29. Acts as a receptor for Herpes simples.
                                                                                                                                                                                                                                                                                                     McDonnell P.C., Brigham-Burke M., Lyn S.D., Minton J., le K., Spampanato J., Silverman C., Hensley P., Emery J.G., Deen K., Eichman C., Chabot-Fletcher M.,

calcineurin, and NP-MT.";

Cell 96:611-614(1999).

-!-FUNCTION: Plays a role in the inducible expression of cytokine genes in T cells, especially in the induction of the IL-2 and 4 (By similarity).

-!-SUBUNIT: Member of the multicomponent NFATC transcription comp that consists of at least two components, a pre-existing cytoplasmic component NFATC and an inducible nuclear component NFATC. Other members such as NFATC4, NFATC3 or members of the activating protein-1 family, MAF, GATA4 and Cbp/p300 can also the complex. NFATC proteins bind to DNA as monomers.

-!- SUBCELLUIAR LOCATION: Cytoplasmic for the phosphorylated form
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Hoey T., Sun Y.-L., Williamson K., Xu X.; "Isolation of two new members of the NF-AT gene family and functic characterization of the NF-AT proteins.";

May be involved in T cell mediated apoptosis and in T cell development.

S-mediated apoptosis may have a role in the induction of tolerance, in the antigen-stimulated suicide of mature t both. Binding to the decoy receptor TNFRSF6B/DCR3 its effects (By similarity).

Usage by and for commercial ires a license agreement (See http://www.isb-sib.ch/announce/ail to license@isb-sib.ch). OT entry is copyright. It is produced through a collaboration Swiss Institute of Bioinformatics and the EMBL outstation -8 Eter activation that is controlled by calcineurin-lephosphorylation. Rapid nuclear exit of NRATC is thought mechanism by which cells distinguish between sustained ient calcium signals. The subcellular localization of y a key role in the gene transcription. SCIFICITY: Highly expressed in placenta, lung, kidney, a ovary. Weakly expressed in placenta, lung, kidney, in peripheral blood lymphocytes. SI Similarity Domain (RSD) allows DNA-binding and we interactions with AP1 factors (By similarity). phorylated by NFATC-kinase; dephosphorylated by in (By similarity). Tumour necrosis factor related ligand - useful for, e.g. treating auto-immune disease and immune responses to tissue grafts.

Claim 12; Page 50-51; 69pp; English.

The sequence is that of human tumour necrosis factor related ligar. (TRELL). TRELL or active fragments can be included with a carrier pharmaceutical compositions to treat cancer, autoimmune diseases cimmune responses to tissue grafts, or to stimulate or suppress the system. It is useful to screen for TRELL receptors, by labelling w detectable label and screening compositions for binding. Agents interfering with TRELL-receptor binding can also be screened for, then be administered, optionally with interferon-gamma, to induce death or treat, suppress or alter immune responses (especially inv

```
ccinoma cells) involving a signal pathway between TRELL and It's coding sequence can be used in gene therapy for TRELL-fers in mammals (especially humans), e.g. tumours, at inflammatory diseases or inherited genetic disorders, by nto cells, and expressing, therapeutically effective amounts e.g. a virus comprising a gene encoding TRELL. It may also the preparation of prepare probes for screening etic DNAs for TRELL-encoding sequences and for antisense

ion to inhibit neoplastic cell growth or for treating tumo rises polypeptides PRO179, PRO207, PRO320, PRO219, PRO221, , PRO301, PRO526, PRO362, PRO366, PRO509 or PRO866.

# 4; 172pp; English.

foetal kidney CDNA clone (see AAA49717). PRO207 shows uence identity to tumour necrosis factor family members, an lymphotoxin-beta (23.4%) and human CD40 ligand (19.8%). 216. A claimed method for inhibiting the growth of a tumour exposing the tumor cell to PRO179, PRO207, PRO328, PRO310, PRO526, PRO356, PRO356, PRO356, PRO359 or PRO866 99), their agonists or chimeric polypeptides incorporating tur is especially a cancer selected from breast, ovarian, tal, urerine, prosetate, lung, bladder and central nervous melanoma and leukaemia. Methods for the recombinant quence is that of human antitumour protein PRO207, as the antitumour proteins are also provided

The present sequence represents a TWRAK protein. The specification describes a method for preventing or treating an immunological distand/or inhibiting an immune response in an animal. The method compadministering a TWEAK blocking agent. The method may be used for preventing and treating immune disorders associated with inapproprexpression and/or activity of TWEAK. These disorders include autoidiseases, acute and chronic inflammation, organ transplant reject Graft-versus-Host disease (GVHD), lymphoid cell malignancies, sept other forms of shock, loss of immune responsiveness (as seen in himmunodeficiency virus (HIV) infections) and failure of the immune
                                                                                                                                                                                                                                                                                                                                                                                                                                                           Preventing and treating immune responses using modulators, especia antibodies, of TWEAK, TWEAK receptors and TWEAK ligands, useful fc treating e.g. inflammation and graft versus host disease.
                                                                                                    TWEAK protein; immunological disorder; immune response; inflammati

ucleic acids encoding PRO polypeptides, useful for treating ignant tumors, leukemias and lymphoid malignancies, angiogenic and immunologic disorders.

nvention relates to the isolation of novel human PRO and the polynuclectide sequences encoding them. The PRO agonists, antagonists or anti-PRO antibodies are useful for on or malignant tunnours (e.g. renal, kidney, bladder, leukaemias and lymphoid malignancies, other disorders such glial, astrocytal, hypothalamic, glandular, macrophagal, lastocoelic disorders, inflammatory, immune and angiogenic e polymucleotide sequences are also useful in gene therapy.

CA; Hilbert DH, Rosen

WPI; 2003-430659/40. N-PSDB; ACC57901. New heteromultimeric complex having a first polypeptide member of tumor necrosis factor (TNF) ligand family, and a second different of TNF ligand family, useful for treating cancer, osteoporosis or autoimmune disease.

Disclosure; Page 368-369; 388pp; English.

The present sequence is the protein sequence for human TWEAK prot invention relates to compositions comprising heterotrimeric complication, necrosis factor (TNF) ligand family members, and their use detection, prevention and treatment of disease. In one embodiment heterotrimeric complex comprises full-length or extracellular por TWEAK and full-length or extracellular portions of other TNF ligationly members, preferably VGGI or VGGI-SV. The heterotrimeric coft the invention are useful for treating an autoimmune disease, osteoporosis, and particularly for inhibiting cancer cell proliferincreasing B cell proliferation, or inducing apoptosis of T cells

individual having a disorder associated with excessive bone resorp e.g. osteoporosis, Paget's disease or arterial calcification. Trea individual having a disorder associated with insufficient bone res comprises administering an endokine alpha antagonist, which is the antibody that binds specifically to endokine alpha polypeptide. The present sequence represents the amino acid sequence of a tumour ne factor family ligand.
                                                                                                                                                                                                                                                                                                       1 MAARRSQRRRGERGEPGTALLVPLALGLGLALACLGLLLAVVSLGSRASLSAQEPAC

The present invention relates to extracellular signal molecules, particularly members of tumour necrosis factor (TNF) family molec designated as TREPA (TNF related endothelium proliferative agent) Soluble biologically active TREPA are used to treat TREPA-associa diseases, tumours or metastases. TREPA is used for inducing angio in human for promoting wound healing and for vascularising grafte for successful grafting and to promote tissue grafts. The present acid sequence is clone ID #690050 human TREPA

Modulating angiogenesis in a mammal for treating diseases mediate angiogenesis, e.g. solid tumors and vascular deficiencies of card peripheral tissue, by administering antagonist or agonist of TWEA

Example 1; Page 41; 46pp; English

The sequence represents a a fusion protein encoded by the express vector pDC409-LZ-TWEAK. The fusion protein comprises a growth hor leader, a leucine zipper multimerisation domain, and the extracel domain of human TWEAK. The fusion protein was used in the isolatic human TWEAK receptor (TWEAKR)-expressing clones from a COS cell human TWEAK receptor (TWEAKR)-expressing clones from a COS cell human TWEAK receptor (TWEAKR) agonists a member of the tumour necrosic (TNF) family and induces angiogenesis: TWEAKR may therefore be us screen for and develop TWEAKR agonists and antagonists for the most close of angiogenesis, to be used in the treatment and diagnosis of human the disorders mediated by angiogenesis include ocular disorders mediated by angiogenesis include arthritis, rheumatism and psoriasis. Other treatable diseases such arthritis, rheumatism and psoriasis. Other treatable diseases incompaning tumours and preneoplastic conditions such as sarcomas and carcinom hemosphilic joints, scleroderma, vascular adheatons, atherosclero plaque neovascularisation, telangiectasia, wound granulation, cor the preneoplastic conditions and ischaemia

mosis Factor family receptor polypeptides and ligands - agnosis and treatment of prostate cancer and developmental abnormalities.

y 13A, 156pp, English.

on describes isolated Tumor Necrosis Factor (TNF) family apptides: APO4, APO6, APO8 and APO9 or their active id isolated TNF related ligands 1 and 3 (TNELL and TNELL) or fragments. APO4 is useful for diagnosing prostate cancer by levels of APO4 in an individual. Prostate cancer can also be polypeptides are also useful for identifying selective by the case also useful for identifying selective ts, useful in diagnosis/treatment of disease by binding of polypeptides/active fragment which is extracellular, or the cell surface. The binding is preferably performed in olypeptides/active fragments are also useful for screening and antagonists by binding and observing the changer in APO4 fective pharmacological agents useful in diagnosis or disease are also identified using APO4 polypeptides/active APO4 signal transducer molecules that specifically interact lasmic domain of APO4 and detecting a change in level of APO4 e method is performed in vivo or in vitro. APO polypeptides ul as immunogens for preparing antibodies. APO4 is also iagnosis/treatment of developmental or gestational nduced apoptosis

Tumour necrosis factor related ligand - useful for, e.g. treatin auto-immune disease and immune responses to tissue grafts. Claim 12; Page 48-50; 69pp; English. Chicheportiche Y, Browning JL; WPI; 1998-145619/13. N-PSDB; AAV18599. 

The sequence is that of mouse tunnour necrosis factor related lig (TRELL). TRELL or active fragments can be included with a carrie pharmaceutical compositions to treat cancer, autoimmune diseases immune responses to tissue grafts, or to stimulate or suppress to immune responses to tissue grafts, or to stimulate or suppress to system. It is useful to screen for TRELL receptors, by labelling detectable label and screening compositions for binding. Agents in interfering with TRELL-receptor binding can also be screened for then be administered, optionally with interferon gamma, to induct death or treat, suppress or alter immune responses (especially in the receptor. It's coding sequence can be used in gene therapy for related disorders in mammals (especially humans), e.g. tunnours, autoimmune and inflammatory diseases or inherited genetic disord introducing into cells, and expressing, therapeutically effective of a vector, e.g. a virus comprising a gene encoding TRELL. It is natural/synthetic DNAs for TRELL-encoding sequences and for anti-

. treating immune responses using modulators, especially TWEAK, TWEAK receptors and TWEAK ligands, useful for inflammation and graft versus host disease. ਰ ਘੁ

ig 1; 45pp; English.

equence represents a TWEAK protein. The specification ethod for preventing or treating an immunological disorder ting an immune response in an animal. The method comprises a TWEAK blocking agent. The method may be used for dereating immune disorders associated with inappropriate d/or activity of TWEAK. These disorders include autoimmune the and chronic inflammation, organ transplant rejection, Host disease (GVHD), lymphoid cell malignancies, septic and shock, loss of immune responsiveness (as seen in human incy virus (HIV) infections) and failure of the immune :umour growth

Chaudhary PM;

1999-205191/17. N-PSDB; AAX23425 New Tumor Necrosis Factor family receptor polypeptides and ligand useful for diagnosis and treatment of prostate cancer and develog or gestational abnormalities.

Claim 40; Fig 13B; 156pp; English.

This invention describes isolated Tumor Necrosis Factor (TNF) fan receptor polypeptides: APO4, APO6, APO8 and APO9 or their active fragments, and isolated TNF related ligands 1 and 3 (TNRL1 and TP their active fragments. APO4 is useful for diagnosing prostate of determining levels of APO4 in an individual. Prostate cancer can treated using APO4 selective binding agents linked to a therapeut moiety. APO4 polypeptides are also useful for identifying select: binding agents, useful in diagnosis/treatment of disease by binding agents to the polypeptide active fragment which is extracellular, expressed on the cell surface. The binding is preferably performed vivo. APO4 polypeptides/ active fragments are also useful for solving consists and antagonists by binding and observing the changes activity. Effective pharmacological agents useful in diagnosis of treatment of disease are also identified using APO4 polypeptides,

1 2 1

APO4 signal transducer molecules that specifically interact asmic domain of APO4 and detecting a change in level of APO4 method is performed in vivo or in vitro. APO polypeptides a simmunogens for preparing antibodies. APO4 is also agnosis/treatment of developmental or gestational . APO8 was transfected to human breast carcinoma cell line duced apoptosis
